AITOR BOLIGE CUBAS

ABOUT ME

Engineering student specializing in innovation and product development. I am attracted to projects in their formative stages, where I can comprehend the underlying principles and contribute to the creation of tangible outcomes.

SCHOLARLY INITIATIVES

BICING & AIR QUALITY NOTIFIER

UPF · 2026

Real-time notification system through Telegram: Bicing bike availability and air quality by location, featuring a dedicated REST API deployed on AWS EC2 and the integration of six external services.
User authentication through OAuth 2.0 (Open Gateway) and an HTML interface utilizing AJAX; a fully functional and documented end-to-end system.

AI FINANCIAL NEWS CURATOR · HACKATHON SBS × N26

Barcelona · 2026

A functional prototype incorporating integrated LLMs (OpenAI API) that personalizes and streamlines real-time financial news for retail users.
I participated in the ideation, UI/UX design (Next.js + TailwindCSS), and implementation of Serverless API routes utilizing a decoupled architecture.
